PROFESSIONAL EXPERIENCE

◦ Bitly

February 2015 - present

Front-end Developer - New York, NY

- Project lead for re-building website as a full-fledged SaaS platform using React, Omniscent, and Immutable using functional programming techniques.
- Collaborated with product, design and data-science team to develop features and data visualizations for customers.
- Maintained features on current Backbone and Marionette site while new platform is under construction.
- Built and maintained internal 'live' styleguide which is used for collaborating with design and UX team on SaaS platform.
- Developed process for creating CSS modules for use with React components which increased iteration speed and decreased total number of lines of CSS by 50%

◦ NBCUniversal

March 2013 - February 2015

Front-end Design Developer - New York, NY

- Developed responsive components and layouts using HTML5 and Sass for the Telemundo.com redesign with the Telemundo designer team and the NBC development team.
- Developed a process to integrate the visual designer's and front-end engineer's workflow, focusing on pair-programming web applications in-browser. Served as a bridge between the graphic designers and engineers, enabling the process to become designer and developer driven (agile-like) and drastically increasing efficiency.
- Rapidly prototyped proof-of-concept systems using HTML5, CSS3, and JavaScript to serve as examples to both the UX and design teams.
- Designed assets such as ads, headers, and icons for websites, signage, and mobile apps.

EDUCATION

2008 - 2011

Fordham University

Bachelor of Arts, Digital Media and Design
